FLYER

GREENHOUSES & CROPS

Zallys FLYER is an electric 4-wheel vehicle designed to aid operations in green-house cultures, especially for speed up and ease the works related to row cultivations. Its special anti-puncture wheels do not need maintenance and guarantee the maximum safety to the operator.

Equipped with a combined modular system, it can be easily converted from a machine with seating for low cultures to a high-level platform for creeper harvesting (such as tomatoes or peppers) or even for simple pruning, keeping the operator always on the vehicle.
